

## Randomisation & Trial Supply Management RTSM/IRT

**Venn Life Sciences Randomisation and Trial Supply Management is an in-house solution developed through the successful collaboration of our biostatisticians, logistics and IT experts.**

Since 1999, our RTSM has been used by our sponsors to centralise the randomisation of patients for their national and international Phase I to IV clinical trials, in addition to the logistics management of their studies.

Our dedicated team focuses solely on delivering high quality RTSM services.

### Our services include:

#### Methodological input

- pre-project consulting & consolidation
- complex models and simulations
- specification to avoid any methodological or unblinding bias

#### Patient & Site Management

- selection/randomisation/code break
- recruitment control
- alert system
- complex randomisation and treatment allocation
- ePro capabilities

#### Logistics management (clinical supplies and samples)

- optimization of logistics models (following methodological constraints, availability, stability and cost)
- automated data upload from sponsor-selected central source (central laboratories, central pharmacies, EDC, ECG etc.)

## Flexible, Adaptable, Cost Effective

• Continuous monitoring (on-line reporting)

• Toll-Free/Web Chat System

• Available in 74 countries, 39 languages... so far!

• Cloud based replication and recovery

• Fully customizable to study specific needs

• High Quality Service at your fingertips

### Regulatory Compliance

*Our RTSM system is regulatory compliant (21CFR part 11 - EMA & FDA inspected) and is developed and validated with a GAMP 5 approach.*
